Additional funding support provided by Isabella County Parks and Recreation Department and Isabella County Community Development Department.

The creation of Discover the Chippewa River was made possible through generous grant support from:

From its beginnings in Mecosta County near the Village of Barryton, the Chippewa River flows for some 80 miles through a mix of woodland habitats, residential neighborhoods and the City of Mount Pleasant. It then flows through woodland and farm country, and into the Saginaw Chippewa Indian Tribe's Isabella Reservation and on to its terminus at the Tittabawassee River in Midland.

Cold water fish species are present in many of the tributaries and some of the upper reaches of the river. The upper mid-reach to lower Chippewa River is a larger to medium size stream that also supports a bass fishery. The river is popular for canoeists, kayakers and tubers during the warm months, especially from Weidman Road west of Mount Pleasant, to the city center.

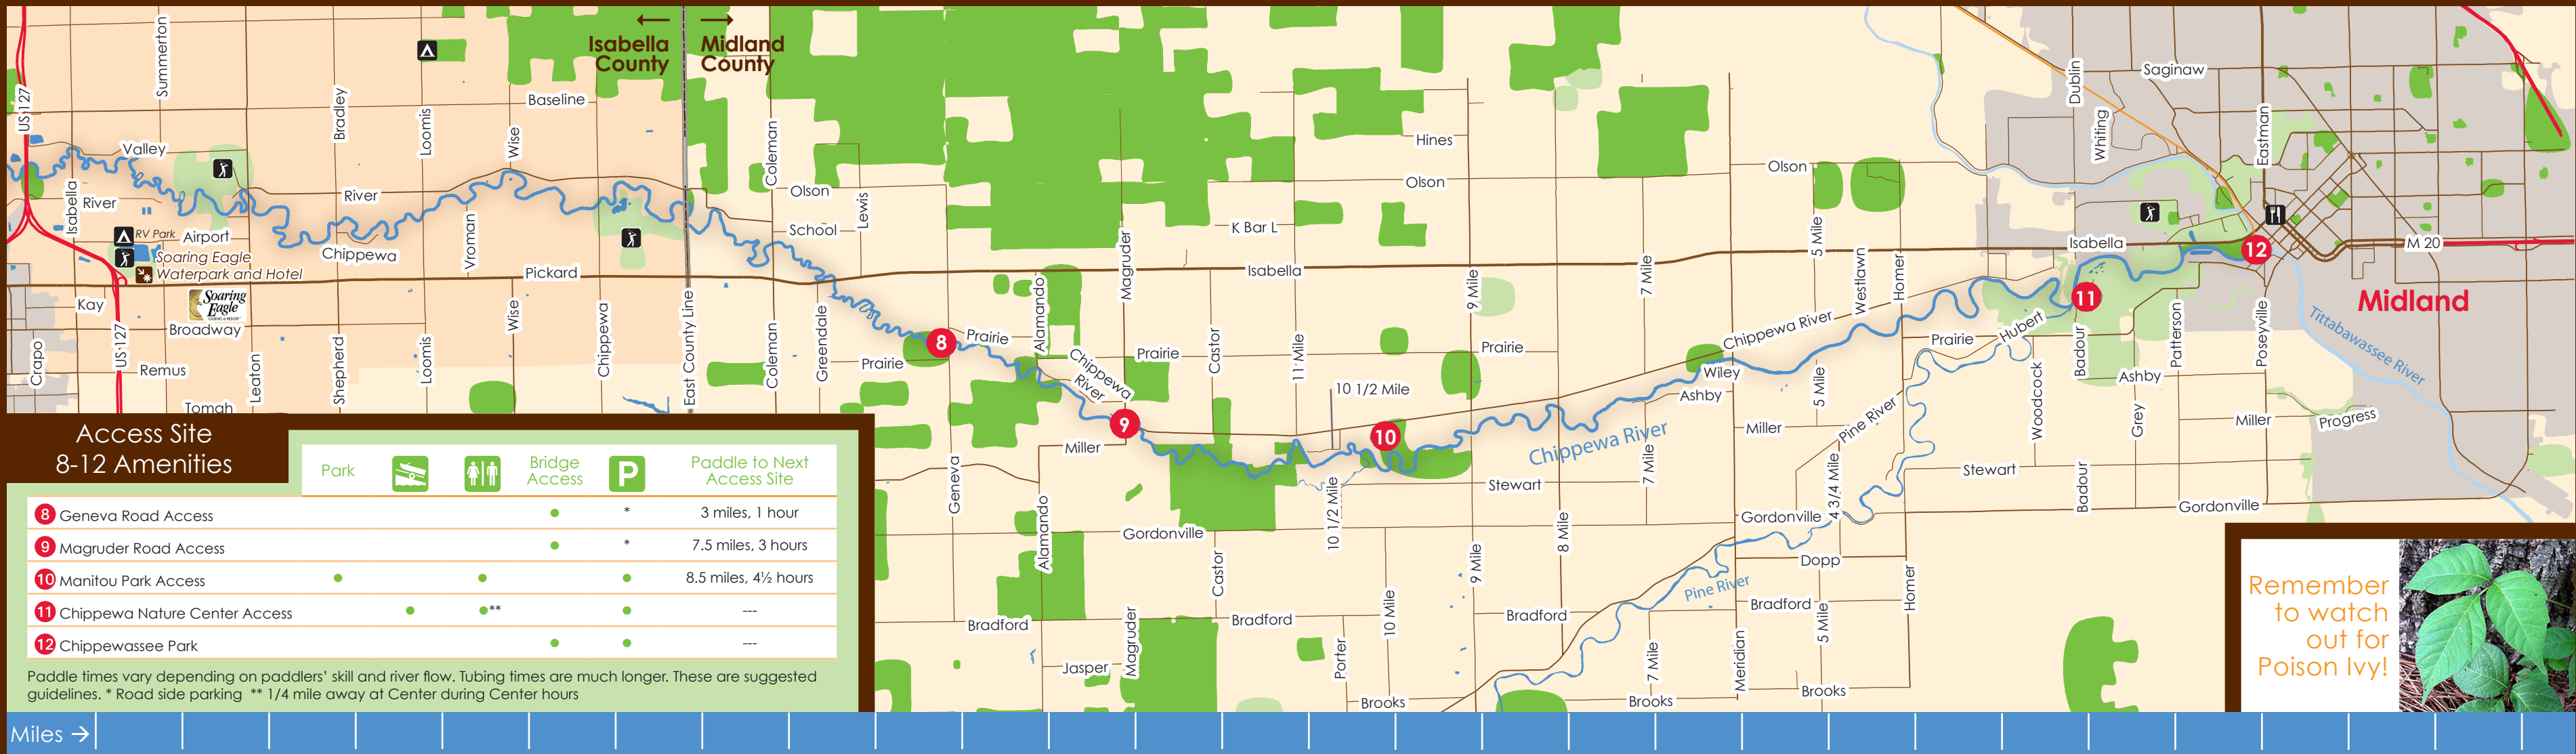

Near the west side of Midland, the Chippewa Nature Center features a myriad of outdoor activities in and along the river, including canoeing and kayaking opportunities. The stretch of river from Leaton Road west of Mount Pleasant to Geneva Road in Midland County currently gets less use due to limited access.

Paddle times vary depending on paddlers' skill and river flow. Tubing times are much longer. These are suggested guidelines. * Road side parking ** 1/4 mile away at Center during Center hours

Please use the river wisely

Leave No Trace

Glass, Styrofoam, fishing line, and other trash pose hazards to wildlife and other users of the watershed. When paddling, tie loose items into the boat or tubes to keep gear and trash from floating away. Join or organize a river clean-up day.

Respect Private Property

Much of the land within the watershed is privately held. Unless an area is designated for public use, keep paddling.

Enjoy and Respect Wildlife

The watershed sustains abundant wildlife. Take time to notice its variety and keep all wildlife at a respectful distance. Look up. You may see an eagle or osprey.

Value Vegetation

The many plants, grasses, mosses, trees, and shrubs of the watershed serve the entire ecosystem in many ways. Tread lightly; avoid picking plants and flowers, and use stairs and trails to prevent erosion.

Think Safety

Wear a personal flotation device when on the water. Avoid parking on busy roads with narrow shoulders. Tell someone of your paddling plans and when you expect to return. Call 911 if you or someone else is in need of emergency assistance.

A Multi-Use Waterway

Within a small portion of the watershed you may find canoeists, kayakers, tubers, anglers in motorized boats, and swimmers, as well as hikers, anglers, and bird watchers along its banks. Avoid paddling over fishing lines, motoring too close to swimmers and smaller boats, and frightening wildlife. Avoid loud and inappropriate language. Respect everyone's right to enjoy the watershed.

Preserve and Protect

Give back to the watershed. Consider joining a conservancy and be a part of protecting in perpetuity the resource you love. If you own land within the watershed and want to see it preserved for generations to come, consider donation options, or a conservation easement.

Safety Disclaimer:

Paddling poses significant potential hazards including risk of injury or death and each person participating in this activity needs to understand the risks involved, obtain the necessary training and take all needed precautions. Users must proceed with care as many of the sections of the river remain isolated and undeveloped. Paddling between Sherman City and Wyman Roads, Isabella and Leaton Roads, and M-20 and Geneva Road is often challenging due to downed trees and infrequent use. This map is a guide. None of the partner organizations or individuals associated with this project makes any representation and specifically disallows any reliance on any statement contained herein, nor assumes any responsibility or liability for property damage, injury, loss, or death resulting directly or indirectly from the use of this guide, websites, links or paddling in the area.

Historical Points of Interest

Drew Dam

A sawmill was located here according to the 1879 plat map. Much of this rock dam remains, although some rocks have been removed in the center. The water flows rapidly and it should be portaged (left).

(Former) Gilmore Road Bridge

Said to have been destroyed in the wreck of a runaway milk truck in the 1950's, it was never replaced. Evidence of the old bridge remains visible on both sides of the river bank.

Mt. Pleasant Mill Pond

The site of several sawmills from the 1850's-1870's (including the Harris sawmill). Much of the original mill pond disappeared via siltation over the years. The dam was removed in 2002.

(Former) Isabella City Dam and Indian Mills

A sawmill, a gristmill, a blacksmith shop, and the Council House of the Saginaw Chippewa Indian Tribe formed the heart of the original settlement from 1858-1888. This site served as the county seat until July 12, 1860.
